

Technical Guide TGAX6

Adding an Operator to Axiom X

Operators are made up of 2 components – The **Operator** itself, which consists of a Login and a Password, and the **Operator Security Profile**. The **Operator Security Profile** determines what you can see, edit and access.

Creating an Operator

Log into Axiom X and select Database, then Operators;

• Select **New**, then fill in the fields with your **Operator Name**, **Login ID**, **Password** and then confirm your password. When done, select **Save**. Test by logging out of Axiom V, then back in with these new credentials. (Note the **Operator Security Profile** field in the middle of the screen. We will be coming back to this later.)

Creating an Operator Security Profile

Go to Database then Operator Security Profile. Select New to create a new Profile or Edit to make changes to an existing Operator Security Profile.
 Please note, you cannot make changes to the Master Profile.

• From the *Devices* tab, the Operator can be restricted in which device they can see and interact with in the system. The operator can be restricted by networks, panel, access points, or even inputs and outputs. Only items that are selected here will be available to the operator.

Master Profile	Selected	Name
	0.5	UNC A Controllers I. 1. UNC500 256-1 Device Controllers 1. RC2 257-1 I. 2 Access Points I. 0 Inputs Inputs 0 Outputs Inputs

From the Companies tab, it is possible to restrict access to different companies. On multi tenanted site
For example you can allocate cardholders to a company and by selecting that company in the operator
profile when the operator logs in they will only see cards for their part of the site/building. (See TGAX4 for
adding companies to the system)
