
One Tudor Street

Tag Security recently completed the installation of Access Control & speed lane access to the recently refurbished offices at one Tudor St EC4. One Tudor Street comprises of 70559 square foot of high specification office area close to Blackfriars Bridge.

Tag were tasked in providing Access Control Security into the building as well as within the common areas. Tag chose the Axiom Lite System from RBH Security Group due to its proven reliability and ease of use. Speed lanes have been installed to control movement of tenants and visitors. The system is monitored and controlled via a PC running the Axiom Lite Software. This enables the building manager Mr Iain Gordon and his security staff to vet the visitors and deliveries to the tenanted floors.

Multi format proximity access control readers have been fitted to each of the three lift cabs, pre-programmed proximity access control cards are issued to visitors at the reception desk on entering the building. These cards allow access through the speed lane and into the lift lobby area. On presentation of the card in any of the lifts the dedicated button to that floor allows the cardholder to only exit on their designated floor.

In addition some of the tenants, after being impressed with the functionality of the Axiom Lite system have taken the system on board in their own areas. This provides local access control without the requirement of additional cards.

Systems Implemented:
